(a) exact supports from cells

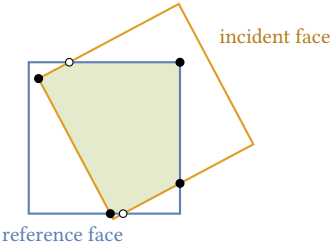

8 cells of directions (the code: 1 536); each stores the vertices whose normal cones meet it

(b) the ball certificate

lateral lines $\geq \delta - \varepsilon$ from 0: the ball $B(0, \delta - \varepsilon) \subset \mathcal{D}$, so δ is the depth

(c) the quadrangle clip

clipped to the reference's side planes, reduced by area to 4 points (filled)
