
robot.xml
visual meshes,
fitted primitives
per geometry: which representation?
MuJoCo primitive
kept as it is
convex hulls
“polytope”
Lodos surface
“sdf”
1 fuse_meshes_by_body
watertight solid per body
2 calibrate_cp_decomp
CoACD hulls + their union
3 interactive_remesh
vertex budget per body
4 fix_nonmanifold
closed manifolds
5 create_surface_data
Hilbert order + SDF bake
_cp/: one mesh per hull
the scene: MJCF edits (hull geoms, keyed geoms, physics) + Surfaces (pairs, parameters)
